Title: Generate Report from Transfer Events Fix
Product: BeefLink / BeefSource – Transfer Events
Version: all
Date: 05-16-2007

Symptom:

When I run Generate Reports from Transfer Events (when double-clicking on an AGIL file), it does not display any detail.

Resolution:

The most likely reason is that your installation of BeefLink or BeefSource has an old version of the AgInfoUpdateFileReport.dll. You should follow the instructions below to install the latest version of this file:

- Browse to the BeefLink or BeefSource page on www.aginfolink.net/swupdates. Under Patches / Fixes, download the file named AgInfoUpdateFileReport.dll.
- Copy this file to the computer running BeefLink in the following location: c:\windows\system32
 - You can Right-click the start button, left-click Explore, then double-click on Local Disk C:, then Windows, then System32 to get to that location.
- Once the file is copied to that location, then right-click on the file and left-click "Rename". Erase the 1 at the end of the file name and change it to an l (lowercase L). Click off the file, it will prompt you if you want to overwrite the existing file. Click YES.
- Double click on the AgInfoUpdateFileReport.dll file to register it with Windows. Alternatively, you can register from the command prompt by typing:
`regsvr32 C:\windows\system32\aginfoupdatefilereport.dll`
- Now, double-click on the agil file again, and then click Generate Reports. You should see the full report.
